

Coding & Solution

Date	05 July 2026
Team ID	N/A
Project Name	FinRelief AI – AI-Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

- Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
- The solution should address the core problem statement and implement the key functional requirements.
- Include all source files, configuration files, and setup instructions needed to run the application.
- Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Harivalli/AI-Powered-Debt-Relief-Financial-Recovery-Platform
Programming Language(s)	Python, JavaScript (JSX)
Framework(s) Used	FastAPI, React (Vite)
Key Features Implemented	- JWT Authentication & secure login - Debt & Expense Management - Dashboard with Financial Health Score - AI Debt Analysis & AI Financial Assistant - Snowball/Avalanche Repayment Planner - PDF Financial Report generation
Pending / Incomplete Features	Credit Score Prediction, OCR-based Bank Statement Analysis, Voice-enabled AI Assistant (listed as future enhancements).

Setup / Run Instructions

- Install Python 3.11+ and Node.js.
- Backend: create virtual environment, install requirements.txt, configure .env, run **uvicorn app.main:app --reload --port 8000**.
- Frontend: run **npm install** then **npm run dev**.

Code Quality Checklist

S.No	Criteria	Status (Yes/No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes

S.No	Criteria	Status (Yes/No)
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular router-based FastAPI backend and a component-based React frontend, uses GitHub for version control, and meets the core functional requirements including AI-powered debt analysis and repayment planning.
