

Performance Testing

Date	05 July 2026
Team ID	N/A
Project Name	FinRelief AI – AI-Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load Testing
Target Module / API	Dashboard API & AI Debt Analysis API
Test Environment	Local
Test Date	05 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Register and log in a user	1	20	Account created, JWT token returned
2	Add debts and expenses	1	30	Records saved successfully
3	Load dashboard with Financial Health Score	1	20	Dashboard data returned correctly
4	Request AI debt analysis	1	30	AI response generated successfully

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass/Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.3 sec	Pass	Within target
2	Response Time (Max)	< 5 seconds	3.1 sec	Pass	Acceptable

S.No	Metric	Target Value	Actual Value	Status (Pass/Fail)	Remarks
3	Throughput (Req/sec)	N/A (small-scale local app)	12 req/sec	Pass	Stable
4	Error Rate	< 1%	0%	Pass	No errors
5	CPU Utilization	< 80%	50%	Pass	Normal
6	Memory Utilization	< 80%	58%	Pass	Normal

Step 4: Observations & Analysis

The application responded quickly across authentication, dashboard, and AI endpoints. No major performance bottlenecks were observed even with concurrent requests. Offline AI demo mode ensured consistent response times when the Gemini API key was not configured.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., Postman API response and load-testing results):
